PIONEERS IN PIPE SOLUTIONS

CRANE

BUILDING SERVICES & UTILITIES

Robust, Reliable, Proven Solution for New Lay Pipes

Customer Specifications

The dedicated range is designed for use with new-lay pipes and other specified situations where the pipe material and nominal sizes are known in advance. Customers can choose from Viking Johnson's standard range or have them custom made to suit a range of diameters and working pressures. This flexibility makes Viking Johnson the natural choice for most major pipeline projects.

Design Liaison

Viking Johnson has worked with clients, consultants and contractors all over the world, assisting in the selection of the product most appropriate to each individual project. Such assistance can include detailed design co-operation with specifying engineers, site visits to aid successful installation, specially designed products to suit project requirements, proof testing in our comprehensive in-house test facility and handling of the extensive documentation and inspection requirements often associated with large projects.

Designed for Flexibility

For pipeline design and installation engineers, the Viking Johnson large diameter couplings are extremely versatile. Each coupling sleeve is internally barrelled, allowing greater angular deflection. Ideal when accommodating misaligned pipes.

Product Capability

Large diameter couplings and flange adaptors are available in a wide range of sizes to suit virtually any customer requirement. Products can be supplied to suit all standard and non standard pipe diameters from DN350 to DN4000. Stepped couplings join pipes of different external diameters and flange adaptors can be supplied with flanges drilled to any national or international standard, or to customers' own specification with a pressure up to 80bar.

Approvals

All products are designed and manufactured under quality management systems certified to ISO 9001 and conform to the American Water Works Association's specification AWWA/ANSI C219 for bolted couplings.

Pipe Materials

Large Diameter Couplings

Product Design Benefits

Corrosion Protection

Metal components are coated with Rilsan Nylon 11, which is WRAS approved for use with potable water, and offers long term corrosion protection and resistance to impact damage.

The nuts & bolts are Sheraplex coated to WIS 4-52-03, which does not gall when re-used and offers a consistent "torque / load" ratio reducing the sensitivity during installation while providing long term corrosion protection.

Cold Expansion

Conforming to AWWA C219 the end ring and centre sleeve are cold expanded, which increases the strength of the steel through work hardening, ensures roundness of manufacture and verifies structural integrity of the material with loads substantially greater than in service.

Flash Butt Welding

Flash butt welding used for end ring and centre sleeve ensuring a full penetration weld with totally homogeneous material and no impurities.

Captive Bolts

Captive non-rotating bolt heads require just a single spanner to install.

Sleeve Length

Standard and long sleeve lengths available to accommodate site conditions.

Internal Barrelling of Sleeve

Internal barrelling of sleeve to accommodate angular deflection of up to 6° (size dependant).

Various Gasket Grades

EPDM (water quality approved) and Nitrile gaskets as standard. Alternative exotic grades available for specialist applications (see Design Data for more details).

Customer Benefits

- Couplings can absorb up to 10mm expansion and contraction, which allows for movement on bridge crossings, in chambers and pump stations. Often eliminates the need for special expansion joints.
- Couplings can offer up to 6° of angular deflection; to allow for the connection of misaligned pipes, take up ground settlement at structures, lay pipes to large radius bends, etc.
- The standard finish for all Viking Johnson products is black Rilsan Nylon 11, which is highly resistant to impact, corrosion, abrasion and chemical attack. However, other coatings such as shopcoat, hot dip galvanising, zinc spray and epoxy coating can be supplied as required.

Large Diameter Flange Adaptors

Product Design Benefits

Corrosion Protection

Metal components are coated with Rilsan Nylon 11, which is WRAS approved for use with potable water, and offers long term corrosion protection and resistance to impact damage.

The nuts & bolts are Sheraplex coated to WIS 4-52-03, which does not gall when re-used and offers a consistent “torque / load” ratio reducing the sensitivity during installation while providing long term corrosion protection.

Cold Expansion

Conforming to AWWA C219 the end ring and centre sleeve are cold expanded, which increases the strength of the steel through work hardening, ensures roundness of manufacture and verifies structural integrity of the material with loads substantially greater than in service.

Flash Butt Welding

Flash butt welding used for end ring and centre sleeve ensuring a full penetration weld with totally homogeneous material and no impurities.

Clear and Full Bore Flange

As standard flange adaptors are supplied with clear bore to slide over pipe for easy installation on site.

Full “S Bore” flange also available for use with wafer style (butterfly) valves.

Flange Drilling

Flange drilling to any standard to accommodate site requirements

Sleeve Length

Standard and long sleeve lengths available to accommodate site conditions.

End Load Forces

Notching of end ring permits the use of tie rods to harness the flange adaptor to accommodate end load forces.

Various Gasket Grades

EPDM (water quality approved) and Nitrile gaskets as standard. Alternative exotic grades available for specialist applications (see Design Data for more details).

Customer Benefits

- ▶ Flange adaptors can absorb up to 5mm expansion, which allows for movement on bridge crossings, in chambers and pump stations. Often eliminates the need for special expansion joints.
- ▶ Flange adaptors can offer up to 3° of angular deflection, to allow for the connection of miss aligned pipe to flange equipment and movement/ settlement in service.
- ▶ The standard finish for all Viking Johnson products is black Rilsan Nylon 11, which is highly resistant to impact, corrosion, abrasion and chemical attack. However, other coatings such as shopcoat, hot dip galvanising, zinc spray and epoxy coating can be supplied as required.

- NOTES**
- General** Viking Johnson manufacture couplings to any pipe OD and pressure. If the product required is not shown in any of our tables please contact Viking Johnson who can provide the relevant information.
 - Pressure** Working pressure is as shown in the table.
Site test pressure is 1.5x working pressure.
 - End Restraint** Dedicated couplings DO NOT resist end load due to the internal pressure - adequate external restraint must be provided to prevent pipe pull out from the coupling.

Australia - Adelaide

Desalination Plant Transfer Pipeline

Large Diameter Flange Adaptor - DN1600

Project

The Desalination Plant has a capacity of up to 100 gigalitres and will provide Adelaide with up to half its annual water requirement. The huge size of the plant will be powered by sustainable energy sources and will ensure that the majority of the water supply is sourced from the sea with lesser reliance placed on the River Murray basin.

Client

South Australian Water
& South Australian Government

Contractor

McConnell Dowell

Distributor

Philmac

Large Diameter Flange Adaptors OD355 - 1016mm to BS EN 1092-1 PN10 Drilling

Specifications

L= Distance back from end of pipe that must be rounded, meet tolerances, and free from any wrapping to ensure correct assembly.

Flange Adaptor Type	Flange Adaptor Section	Sleeve Length S (mm)	Distance L (mm)	Setting Gap X (mm)		Bolt Details		
				Min.	Max.	Bolt Dia.	Length (mm)	Torque (Nm)
Standard Sleeve	L02	73	150	25	50	M12	140	55 - 65
Long Sleeve	L03	123	200	25	100	M12	180	55 - 65
Standard Sleeve	YF2	87	150	32	76	M16	160	95 - 120

Standard Sleeve	XSXG	254	200	57	117	M16	400	95 - 120

NOTES

- General** Viking Johnson manufacture flange adaptors to any pipe OD and flange drilling. If the product required is not shown in any of our tables please contact Viking Johnson who can provide the relevant information.
- Pressure** Working pressure is in accordance with the flange drilling. Site test pressure is 1.5x working pressure.
- End Restraint** Dedicated flange adaptors DO NOT resist end load due to the internal pressure - adequate external restraint must be provided by either anchoring the pipework or use of tie rods to restrain the flange adaptor and prevent pipe pull out.
- Tie Rods** When using tie rods to provide restraint, depending on the pipe OD & flange drilling the flange adaptor end ring may need to be notched to allow the tie rod to pass over. The table below provides details on :-
 A) Those products that do not require notching (i.e. there is no interference between the tie rods and end ring) - indicated by "Not Rqd."
 B) Those products where there is interference between the tie rod and end ring and do require notching, with the number of notches provided as standard indicated.
- Tie Rod Yield Strength** The number of notches indicated assumes the use of tie rods with a minimum yield strength of 725 N/mm².
 If tie rods with a lower yield strength are used, then depending on the working pressure an increased number than that specified in the table may be required; in this situation please advise Viking Johnson of the number of notches and we will accommodate your requirements.

Standard Sleeve	XSXG	254	200	57	117	M16	400	95 - 120

NOTES

- General** Viking Johnson manufacture flange adaptors to any pipe OD and flange drilling. If the product required is not shown in any of our tables please contact Viking Johnson who can provide the relevant information.
- Pressure** Working pressure is in accordance with the flange drilling. Site test pressure is 1.5x working pressure.
- End Restraint** Dedicated flange adaptors DO NOT resist end load due to the internal pressure - adequate external restraint must be provided by either anchoring the pipework or use of tie rods to restrain the flange adaptor and prevent pipe pull out.
- Tie Rods** When using tie rods to provide restraint, depending on the pipe OD & flange drilling the flange adaptor end ring may need to be notched to allow the tie rod to pass over. The table below provides details on :-
 A) Those products that do not require notching (i.e. there is no interference between the tie rods and end ring) - indicated by "Not Rqd."
 B) Those products where there is interference between the tie rod and end ring and do require notching, with the number of notches provided as standard indicated.
- Tie Rod Yield Strength** The number of notches indicated assumes the use of tie rods with a minimum yield strength of 725 N/mm².
 If tie rods with a lower yield strength are used, then depending on the working pressure an increased number than that specified in the table may be required; in this situation please advise Viking Johnson of the number of notches and we will accommodate your requirements.

Materials & Relevant Standards

Flange/End Ring

Steel to BS EN10025-2: Grade S275JR

Studs/Nuts/Washers

Studs - Steel to BS EN ISO898-1: Property Class 4.8

Nuts - Steel to BS4190: Grade 4

Washers - Stainless Steel to BS1449:Part 2: Grade 304S15

Coatings

Body, Flange & End Ring - Rilsan Nylon 11 to WIS 4-52-01 Part 1

Nuts and Studs - Sheraplex coated to WIS 4-52-03

Gaskets: L02/L03/YF2/YF3

Rubber 80 IRHD Moulded Compound to BS EN681-1: Type WA,WC,WG or BS EN682: Type G (other materials available on request)

Gaskets: A2E/A2H/XSXXG

Rubber 70 IRHD Moulded Compound to BS EN681-1: Type WA, WC, WG or BS EN682: Type G (other materials available on request)

Standard Sleeve	XSXG	254	200	57	117	M16	400	95 - 120

NOTES

- General** Viking Johnson manufacture flange adaptors to any pipe OD and flange drilling. If the product required is not shown in any of our tables please contact Viking Johnson who can provide the relevant information.
- Pressure** Working pressure is in accordance with the flange drilling. Site test pressure is 1.5x working pressure.
- End Restraint** Dedicated flange adaptors DO NOT resist end load due to the internal pressure - adequate external restraint must be provided by either anchoring the pipework or use of tie rods to restrain the flange adaptor and prevent pipe pull out.
- Tie Rods** When using tie rods to provide restraint, depending on the pipe OD & flange drilling the flange adaptor end ring may need to be notched to allow the tie rod to pass over. The table below provides details on :-
 A) Those products that do not require notching (i.e. there is no interference between the tie rods and end ring) - indicated by "Not Rqd."
 B) Those products where there is interference between the tie rod and end ring and do require notching, with the number of notches provided as standard indicated.
- Tie Rod Yield Strength** The number of notches indicated assumes the use of tie rods with a minimum yield strength of 725 N/mm².
 If tie rods with a lower yield strength are used, then depending on the working pressure an increased number than that specified in the table may be required; in this situation please advise Viking Johnson of the number of notches and we will accommodate your requirements.

Materials & Relevant Standards

Flange/End Ring

Steel to BS EN10025-2: Grade S275JR

Studs/Nuts/Washers

Studs - Steel to BS EN ISO898-1: Property Class 4.8

Nuts - Steel to BS4190: Grade 4

Washers - Stainless Steel to BS1449:Part 2: Grade 304S15

Coatings

Body, Flange & End Ring - Rilsan Nylon 11 to WIS 4-52-01 Part 1

Nuts and Studs - Sheraplex coated to WIS 4-52-03

Gaskets: L02/L03/YF2/YF3

Rubber 80 IRHD Moulded Compound to BS EN681-1: Type WA,WC,WG or BS EN682: Type G
(other materials available on request)

Gaskets: A2E/A2H/XSXC

Rubber 70 IRHD Moulded Compound to BS EN681-1: Type WA, WC, WG or BS EN682: Type G
(other materials available on request)
