Irrigation - 14km Water Channel from the Tisa River

Large Diameter Dedicated Couplings DN1200

Project

The contractor built a 14km long water channel from the nearby Tisa River to supply the integral irrigation system supporting a large agricultural area. Once through the channel, water passes through GRP piping (DN1200) to an accumulation reservoir then onto the agricultural area supporting the growth of a wide range of fruit and vegetables.

The Viking Johnson large diameter dedicated coupling installation was fast and easy. The installation team greatly appreciated the gasket quality especially as it was fitted at very low temperatures, close to 0°C with no problems.
